SKILLS

PROGRAMMING

Golang • Java • Kotlin • Typescript
• JavaScript • C# • .NETCore • Python
• Spring Boot • Node • ReactJS • NextJS

SOFTWARE ARCHITECTURE

GraphQL • Object Oriented
• RESTful & Event driven architecture •
gRPC

AI

MCP Servers

CLOUD COMPUTING

AWS • Microservices • Docker • Terraform
• Queueing (Kafka / ActiveMQ / SQS)
• Storage (OpenSearch / DynamoDB / S3)

DATABASE

SQL • NoSQL • Performance tuning

ENGINEERING LEADERSHIP

Requirements analysis • Sprint planning •
Customer pre-sales • People management

METHODOLOGIES

Agile • Waterfall
• Test Driven Development • SCRUM

EDUCATION

UNSW

MASTER (WITH EXCELLENCE) OF
INFORMATION TECHNOLOGY
Nov 2016 | Sydney, Australia
High Distinction Average (Top 9% in class)

BS IN COMPUTER SCIENCE

Nov 2012 | Sydney, Australia

LANGUAGES

Native proficiency:
English • Mandarin Chinese

Business proficiency:
Hindi

EXPERIENCE

MOTIONAL STAFF ENGINEER TEAM LEAD

📅 Dec 2025 –Present 📍 Singapore

Engineering Enablement Team lead tasked with improving developer productivity across the company

Stack: Python, Bazel, C++

- Introduced new on-call rotation app within 2 months of joining and onboarded **100** new developers to the on-call system, preventing costly context switching for engineers across the company
- Ongoing: Lead the initiative to migrate Jira workflows into new custom built system saving **1 week** in build to release time

TIKTOK SENIOR ENGINEER

📅 Sept 2024 –Nov 2025 📍 Sydney, Australia

Developer for the Video Quality Platform team reporting on global video analytics for internal use

Stack: Golang, Python, SQL

- Built asynchronous Spark, Kafka and Clickhouse query engine querying **25 petabytes of video analytics data** in under 60 seconds, giving 90+ SREs near-real-time quality of service dashboards
- Worked with the US / EU technical operators to convert requirements into **Chinese documentation** for CN dev teams enabling global teams to access video quality dashboards
- Designed and built analytics to track **SLO, query response times and other metrics** for the Video Quality Platform across 5 regions
- Upgraded the platform codebase from 0% unit test code coverage to **42% in 4 months** and built **2 MCP** server endpoints for LLM access increasing AI adoption across the service

TRAINLINE ENGINEERING TEAM LEAD

📅 May 2023 - June 2024 📍 London, United Kingdom

Team lead for the Ecommerce team handling all payments for train tickets across Europe

Stack: C#, SQL

- Engineering team lead for 10 engineers handling **£4.3 billion** in sales annually
- Drove feature specifications, timelines & company wide negotiations for 2 key migrations projects worth **£500,000** from SQL to AWS DynamoDB and OpenSearch
- Introduced new Jira service portal to handle and triage automatically 20+ weekly technical requests improving team productivity by **10%**
- Used performance data to split the team 2 squads with streamed priorities and OKRs to improve team focus by **20%**
- Planned engineering team OKRs and got **2** junior engineers promoted to senior engineers within 1 year

CERTIFICATIONS

2016 - Microsoft 70-461 : Querying SQL Server • 2021 - Udemy: Kotlin for Java Developers

OPEN SOURCE

Contributor: GraphQL-Markdown
Contributor: DJI Android Mobile SDK

PERSONAL PROJECT

Launched own Solana coin to learn more about Crypto

EXPERIENCE

ATLASSIAN **SENIOR SOFTWARE ENGINEER**

 May 2020 – May 2023  Sydney, Australia

Founding engineer for the developer platform portal 'Compass' which is used to manage software services in one tool

Stack: Kotlin, Java, ReactJS

- Brought daily active users in 'Compass' from 0 to **8000** over 9 months, driving company adoption metrics
- Organised customer **10+** interviews to gather functional requirements for the 'activity feed feature' in Compass
- Successfully shipped the 'activity feed' feature to show software lifecycle for a service to **400** daily active users using GraphQL, PostgreSQL and ReactJS
- Lead public GraphQL API developer and **wrote GraphQL linter** to automate GraphQL validation across the company
- Built Compass and Jira 'incident issue type' sync by efficiently parsing and filtering **1 million request** per minute using minimal memory footprint
- Interim engineering manager for **7 months**, mentored 8 developers & conducted over 20 technical interviews for team hires

STEPSTONE GROUP **SENIOR SOFTWARE ENGINEER**

 May 2018 – April 2020  London, United Kingdom

Stack: C#, NodeJS

- Built a producer & consumer microservice emailing system capable of sending **2 million** emails per day
- Designed and built 4 high volume microservice systems (upwards of **1 million requests**) per day that handled email subscriptions, job searching and event tracking
- Architected and built a ReactJS & NextJS application that came in 3 flavors : iFrame, embedded widget and a fully hosted website for 3rd party clients to integrate with and integrated these with **6 clients**
- Travelled to overseas offices to train offsite teams in writing high performing C# code and AWS queuing technologies such as SES and SNS

LEAP LEGAL SOFTWARE **SOFTWARE ENGINEER**

 Nov 2016 – May 2018  Sydney, Australia

Stack: C#, Terraform

PWC **SOFTWARE ENGINEER**

 Jan 2013 – July 2016  Sydney, Australia

Stack: C#, SQL
